
CareConnection™ Interface

Vitals, weight and temperature collected in CareConnection devices are sent to your NetSolutions EMR from the bedside or point of care.

CareConnection delivers simple, accurate charting

CareConnect is as simple as 1-2-3:

1. Caregivers take vitals using rugged Vitals Care Carts, take weights using connected scales and may choose to take tympanic temperatures with connected thermometers.
2. Caregivers review measurements on an easy-to-use touchscreen tablet. One touch sends the data (linked to caregiver ID, resident ID and time/date stamped) to the NetSolutions electronic medical record system (EMR) via the CareConnection cloud-based software.
3. Clinical professionals receive alerts if vitals or weights breach the thresholds you've defined. The data can be accessed through the CareConnection web platform or NetSolutions' Vitals feature.

Care Connection is the only solution designed specifically for the unique challenges of the long term and post-acute care industry. It fits seamlessly into your workflow and reduces the time and steps required to get information into the resident's chart and reduces charting errors.

Immediate access to clinical data and built-in alerts gives your clinical team information for quick intervention— improving outcomes and reducing hospital readmission.

CareConnection Interface with NetSolutions Vital Parameters

The interface between CareConnection and NetSolutions sends data from CareConnection devices to the NetSolutions Vital Parameters area of the EMR. Resident information from NetSolutions ADT flows to CareConnection and is used to select residents.

Vital Parameters is a built-in feature of NetSolutions Care Plan and Physician Orders. Parameters include:

- » weight
- » temperature
- » pulse
- » blood pressure
- » oxygen saturation
- » level of consciousness
- » respiration

Vitals maintains acceptable ranges and when you enter data in Vitals outside those ranges it alerts you. For data imported from CareConnection, you can set up NetSolutions eAssignment to alert when Vitals exceed acceptable ranges. A report lists vital parameters of all or selected residents. It shows at a glance whether data is missing or needs attention.

Long Term Post Acute Care
+Skilled Nursing Facility

Certification gives you an objective way to select LTPAC software that is secure, complete, and ready for Electronic Health Records.

You can enter data directly into Vitals or set it up for data to flow to it automatically from CareConnection and NetSolutions Point of Care, and eMAR. With the NetSolutions eMAR you can flag orders to require a specific vitals check during the med pass. Results are shared automatically with Vitals.

About Constant Care Technology

Constant Care Technology's flagship product, CareConnection™ is software that connects medical devices at bedside to several leading electronic health record vendors. CareConnection also provides a mobile kiosk capability for caregivers to use other point-of-care software at bedside.

Constant Care Technology™ is the leading provider of advanced medical device integration and telehealth systems specifically designed for the long-term and post-acute care (LTPAC) industry.

Company products include CareConnection™, the first FDA-cleared medical device integration solution designed specifically for LTPAC, and LILAH (Living Independent Life At Home), which supports remote monitoring and care for patients as they transition to home from hospitals or post-acute care facilities and for patients in assisted living or independent living care settings. For more information on Constant Care Technology's solutions, visit www.constantcaretechnology.com.

System Requirements

In addition to the CareConnection system, the interface requires use of NetSolutions Care Plan and/or Physician Orders with their built-in Vital Parameters feature.
